Place of birth and date : Torhout, march 30, 1977  
Marital status : Cohabitation, 3 children

## Objective

---

After working several years in a production environment of a multinational, I gradually slipped from the process and quality side to the engineering side. During several years of practical working in production plants to install and start-up equipment I had the chance to get more involved in the preparation of projects.

My skills of project management improved by working in the engineering office of a major German machine constructor.

Since then I worked on a vast number of industrial projects for different employers.

Last year I started **Technics@GRYP**. My own project management company.

In the future I would like to continue working as a freelancer in an international industrial environment as an all-round project manager. A good balance between office and practice is important, as well as short international missions.

## Key skills

---

- Management of projects from scratch to finish.
- Team leader in all kinds of projects. (investment, improvement,...)
- Vast knowledge of existing industrial equipment.
- Very good understanding of process control.
- Independent, creative and target focused.
- Good communication skills
- International experience.
- CAD, Word, Excel, ... fluent with informatics.

## Experience

---

### Project manager – **Technics@GRYP** – Veldegem

April 2016 - now

Freelance technical project management

- Design and specification
- Tendering
- Startup and troubleshooting
- Panel production & processing
- Material handling (solid and liquid)
- Feed equipment
- Automation and power distribution

### Technisch project ingenieur – **Group Depre** - Beernem

July 2014 - now

Investment projects for the feed and petfood division of Group Depre.

Latest projects: Revamp and virtualisation of complete factory automation system from PCS7 to S7, Bagging and case packing line for petfood, new high tension system, ...

## Project engineer - Recticel - Wevelgem

September 2010 – June 2014

Investment projects in the building insulation division of Recticel  
Project management, purchase, site supervision and start-up of a "green field" production line and multiple smaller projects.  
Specifications, purchase, assembly and start-up of industrial equipment.  
Latest projects: New production plant Bourges (25mil€), Pentane storage (300k€), Dosing of additives (125k€), Upgrade cooling towers and crosscutsaw (2,5mil€), rebating line with dust extraction (4,8mil€), raw material storage (1.5mil€), upgrade of wetend, upgrade of laydown, heating plates, blending system,...

## Project engineer - Sicoplan - Lauwe

April 2007 - September 2010

Electrical engineering for MDF and particle boards  
Specifications of equipment

## Service engineer - Bekaert - Ingelmunster

April 2003 - April 2007

Steel wire processing machines  
Liquid and gas filtration projects  
Combustion and flaring systems in petrochemical industry, landfills, waste water, ...  
Service on existing equipment

## Process and quality engineer - Bekaert - Zwevegem

July 2000 - March 2003

Reporting quality level of production.  
Improving product quality and decreasing impact on environment.

## Languages
